Overview

Identifying Intended Outcomes and Evaluation Questions

Question Break

Planning for Data Collection and Beyond

Question Break

Interpreting Results

Question Break

Identifying Intended Outcomes and Evaluation Questions

Outcome Evaluation Steps

1. Define intended outcomes
2. Identify evaluation questions
3. Plan for data collection and beyond
4. Collect and analyze data
5. Interpret results (answer evaluation questions)

Webinar Sections

- 1** Define intended outcomes
Identify evaluation questions
- 2** Plan for data collection and beyond
Collect and analyze data
- 3** Interpret results (answer evaluation questions)

Outcome

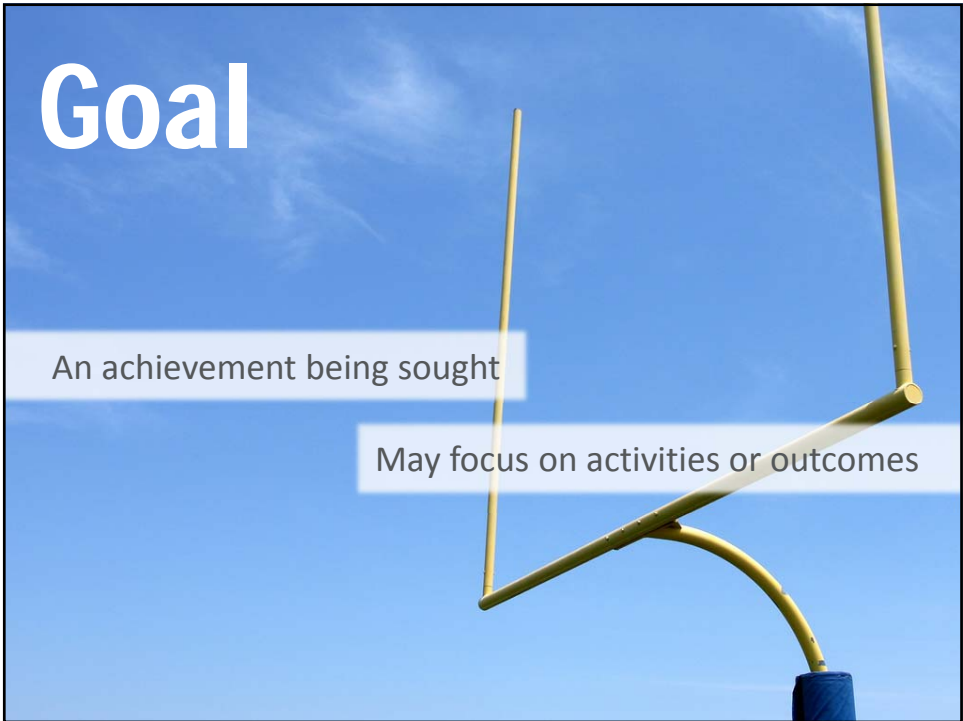

**change
ahead**

Any change resulting from project activities and outputs

Activity

What a project does, the actions it takes

Goal

An achievement being sought

May focus on activities or outcomes

A whiteboard with a blue eraser and a yellow marker, set against a light blue background. The board is divided into two columns. The left column is titled 'Activity goal' and the right column is titled 'Outcome goal'.

Activity goal
(what a project will do)

EvaluATE will deliver 4 webinars per year, serving 1,000 people

Outcome goal
(what difference it will make)

Webinar participants will improve their evaluation knowledge and practices

A whiteboard with a blue eraser and a yellow marker, set against a light blue background. The board contains handwritten text in red cursive.

*Real goal statements
from real ATE projects*

“

The goal of the project is to increase the supply of qualified cybersecurity professionals for industry and government.

Excerpt of actual ATE project abstract from www.nsf.gov/ate

“

The goal of the project is to **increase the supply** of qualified cybersecurity professionals for industry and government.

.....
Outcome: More qualified workforce

“

The goal of this project is to develop an associate's degree in mechatronics, incorporating pathways from local high schools into the degree offering at three partner colleges.

Excerpt of actual ATE project abstract from www.nsf.gov/ate

“

The goal of this project is to **develop an associate's degree** in mechatronics, incorporating pathways from local high schools into the degree offering at three partner colleges.

.....
Activity: Create degree program

“

This project has the overarching goal of increasing awareness of opportunities in science, technology, engineering, and mathematics (STEM) disciplines for women and underrepresented minorities.

Excerpt of actual ATE project abstract from www.nsf.gov/ate

“

This project has the overarching goal of **increasing awareness** of opportunities in science, technology, engineering, and mathematics (STEM) disciplines for women and underrepresented minorities.

.....
Outcome: Change what people know about STEM disciplines

“

The project's goal is to build a sustainable program to enhance process technology education by introducing new hands-on opportunities through use of light-weight extremely low-cost miniature industrial equipment with a small footprint that fits on a standard desktop or which can be taken home for use in homework assignments.

Excerpt of actual ATE project abstract from www.nsf.gov/ate

“

The project's goal is to **build** a sustainable program to enhance process technology education by **introducing** new hands-on opportunities through use of light-weight extremely low-cost miniature industrial equipment with a small footprint that fits on a standard desktop or which can be taken home for use in homework assignments.

.....
Activity: Create program, use new equipment

INTENDED OUTCOMES

specific, realistic statements about what is expected to **change** for individuals or groups **relevant** to the need that the project is designed to address

Current wind energy workforce:

CASE Growing a New Generation of Energy Technicians and Professionals

Projected retirement within 10 years:

CASE Growing a New Generation of Energy Technicians and Professionals

Increase academic rigor

Design and activate career pathways

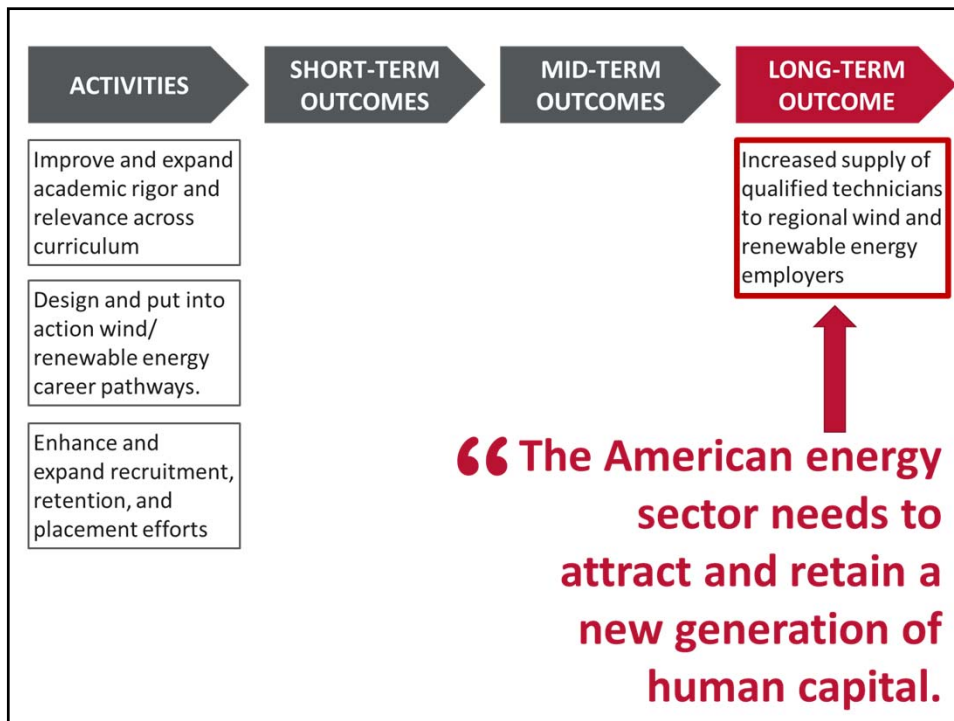

Enhance recruitment, retention, and placement efforts

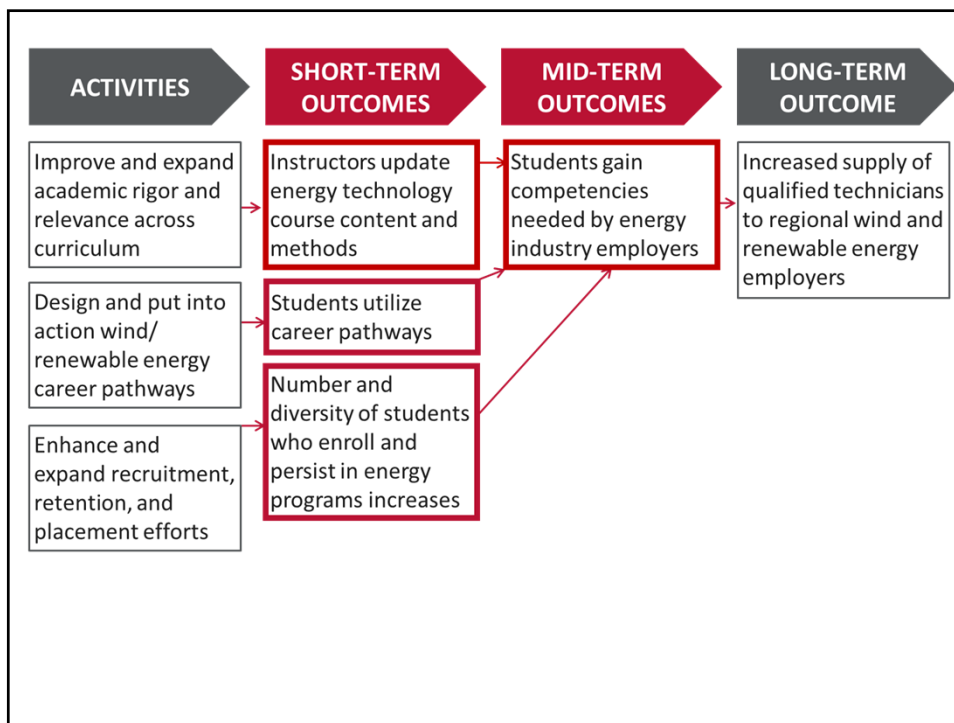

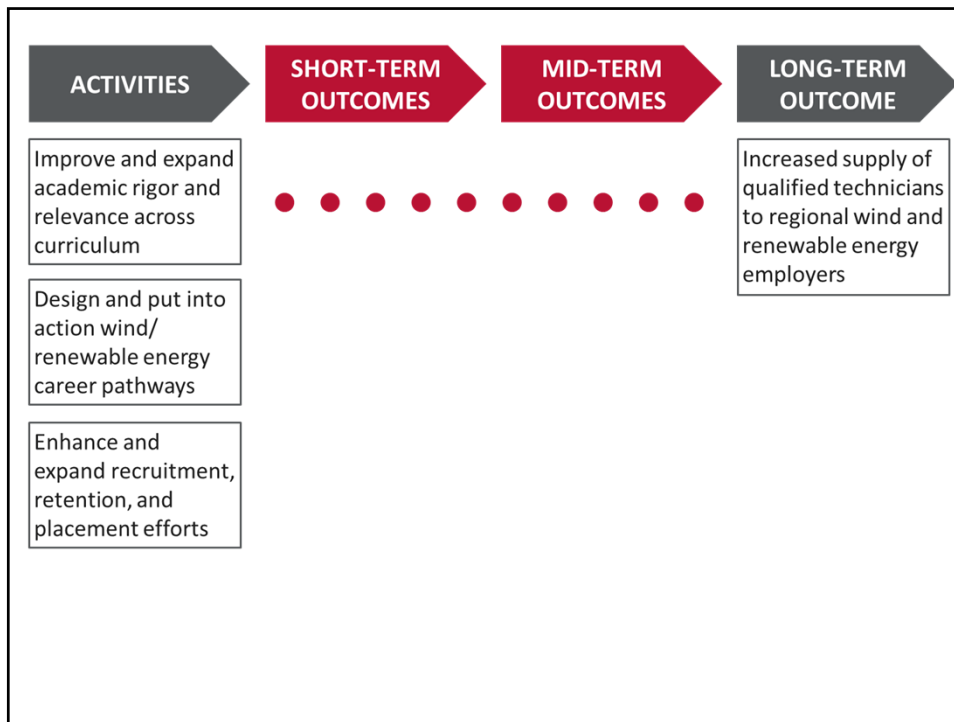

CASE Growing a New Generation of Energy Technicians and Professionals

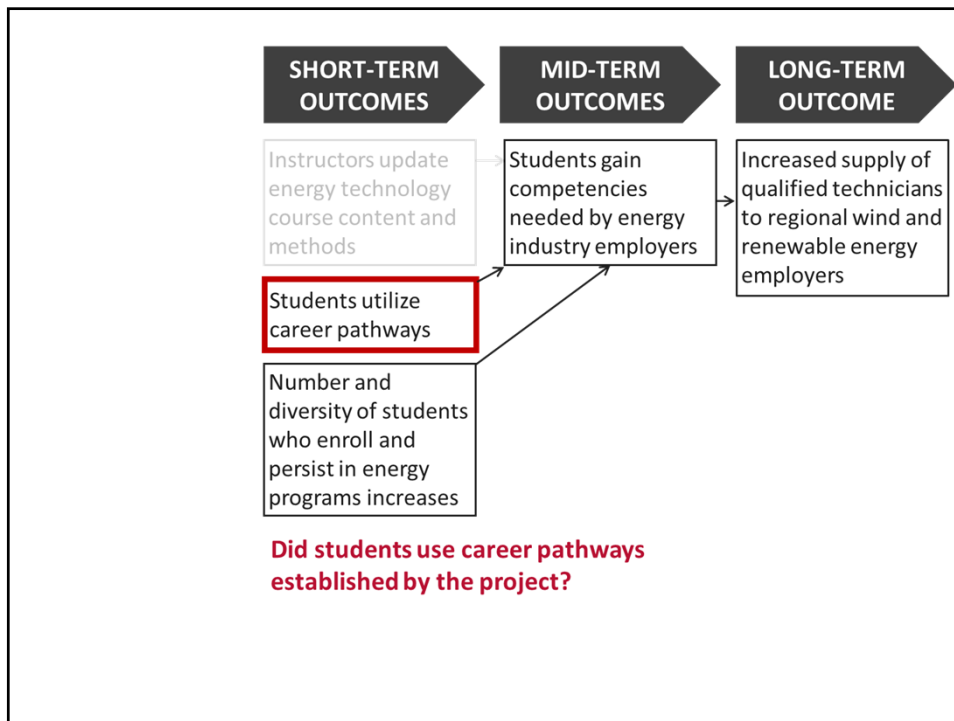

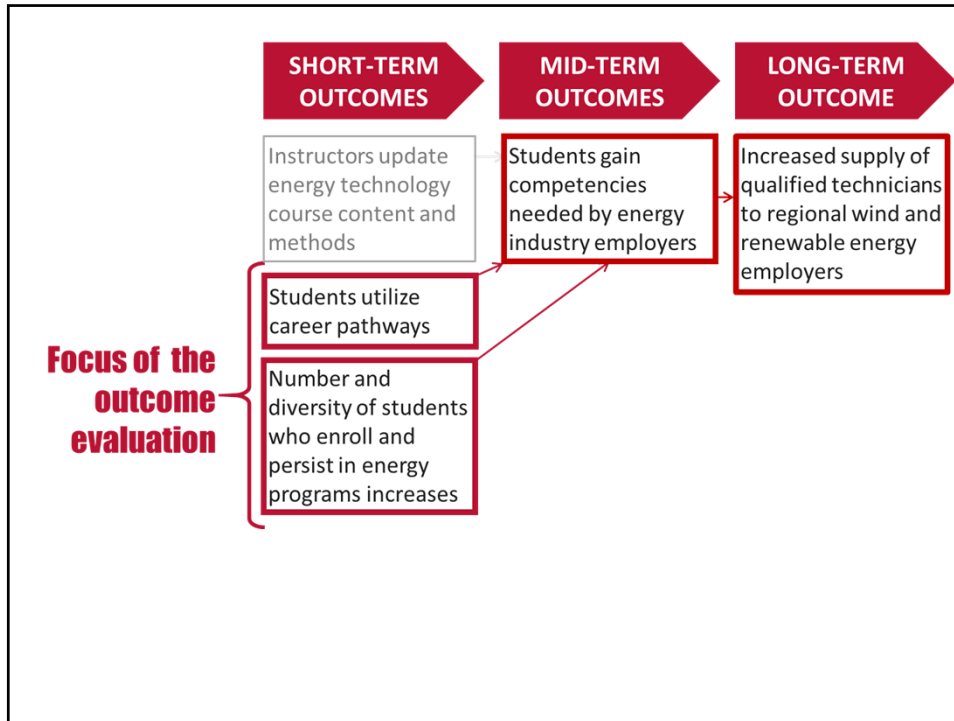

Project Goals

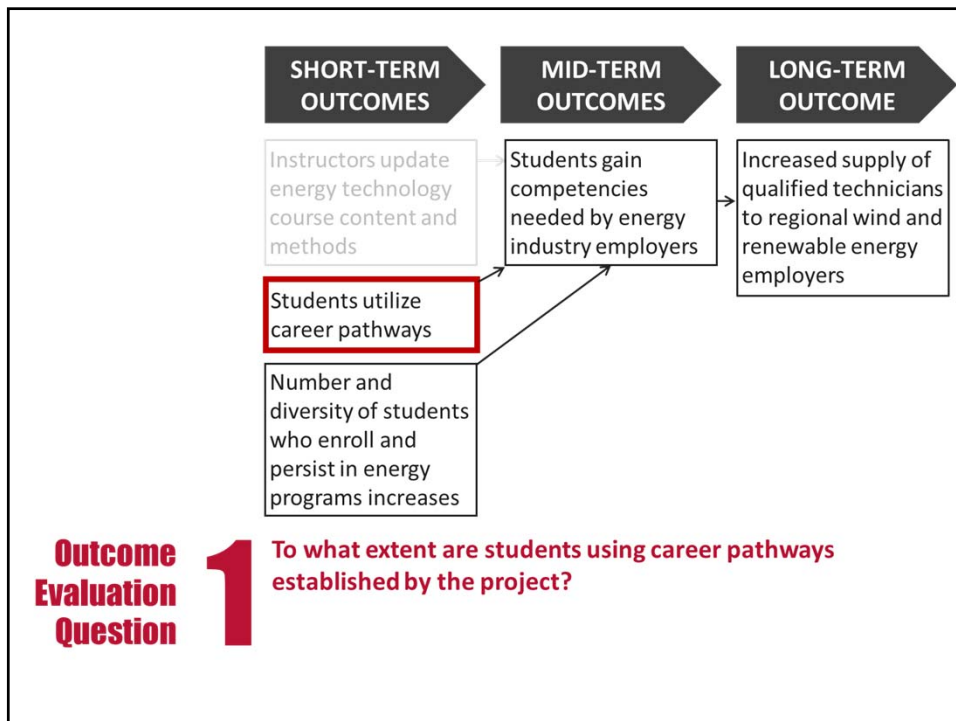

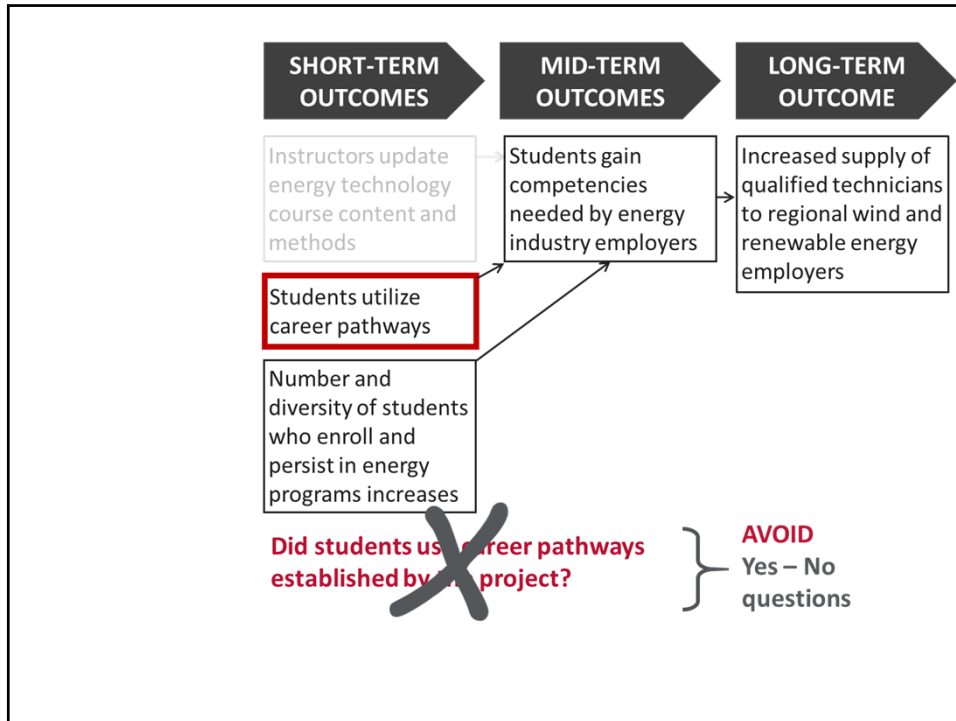

- 1. **Improve** and **expand** academic rigor and relevance across core technology curriculum and wind energy technology specific curriculum.
- 2. **Design and put into action** wind/renewable energy career pathways.
- 3. **Enhance and expand** recruitment, retention, and placement efforts across technology programs.

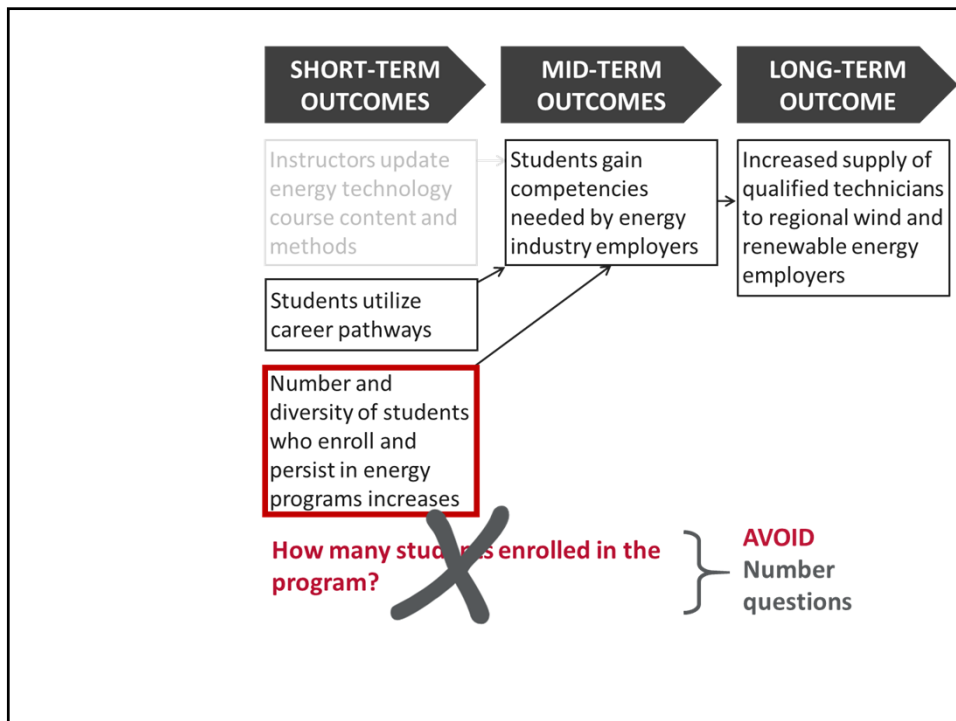

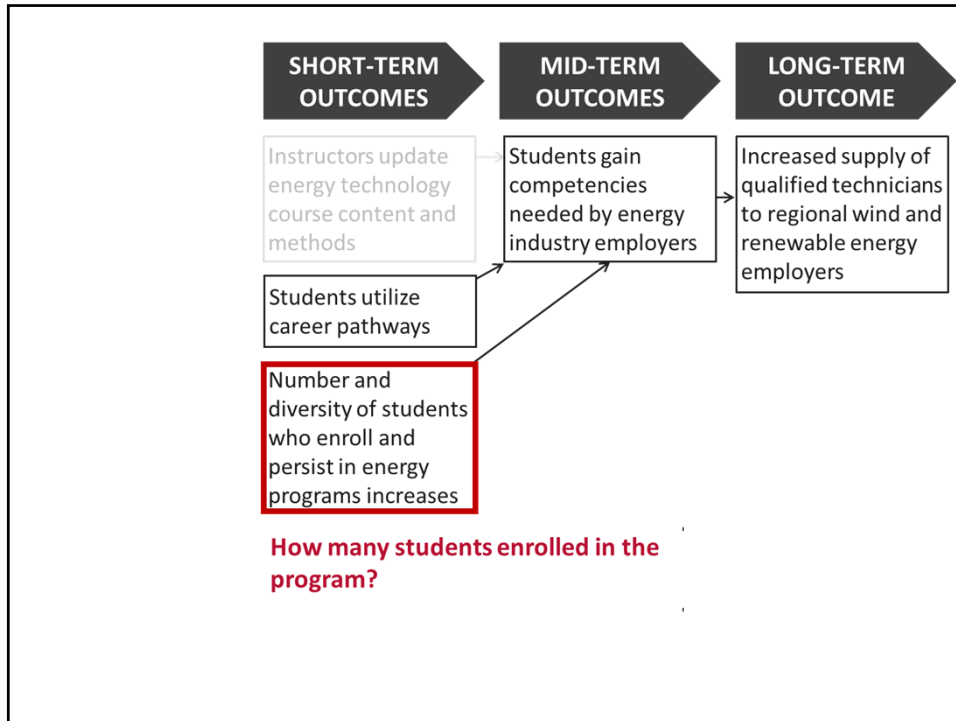

.....
Project actions = Activities

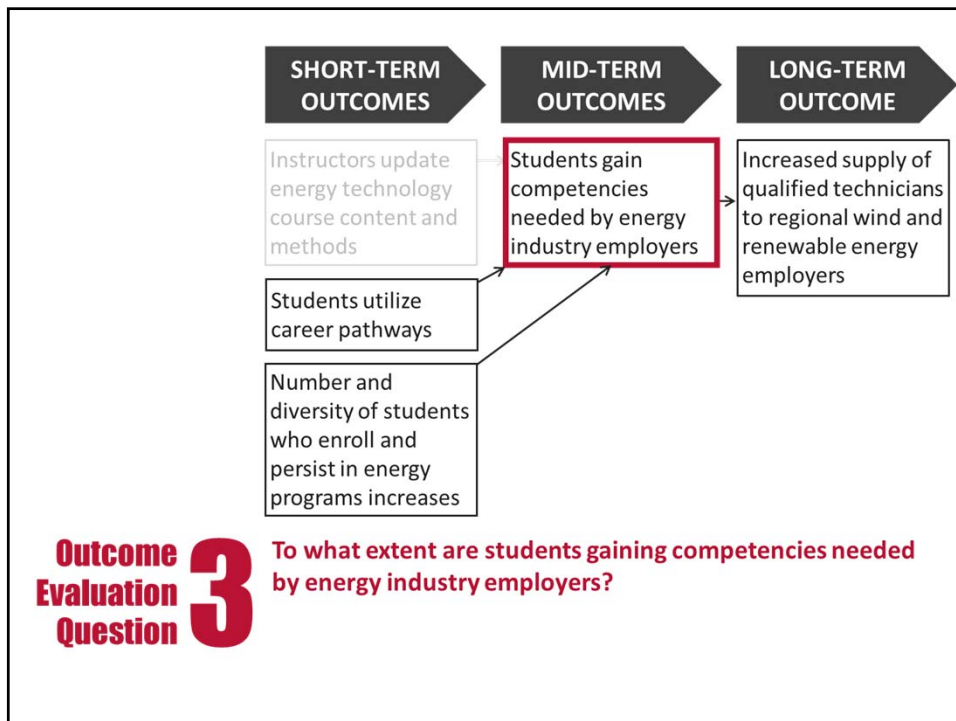

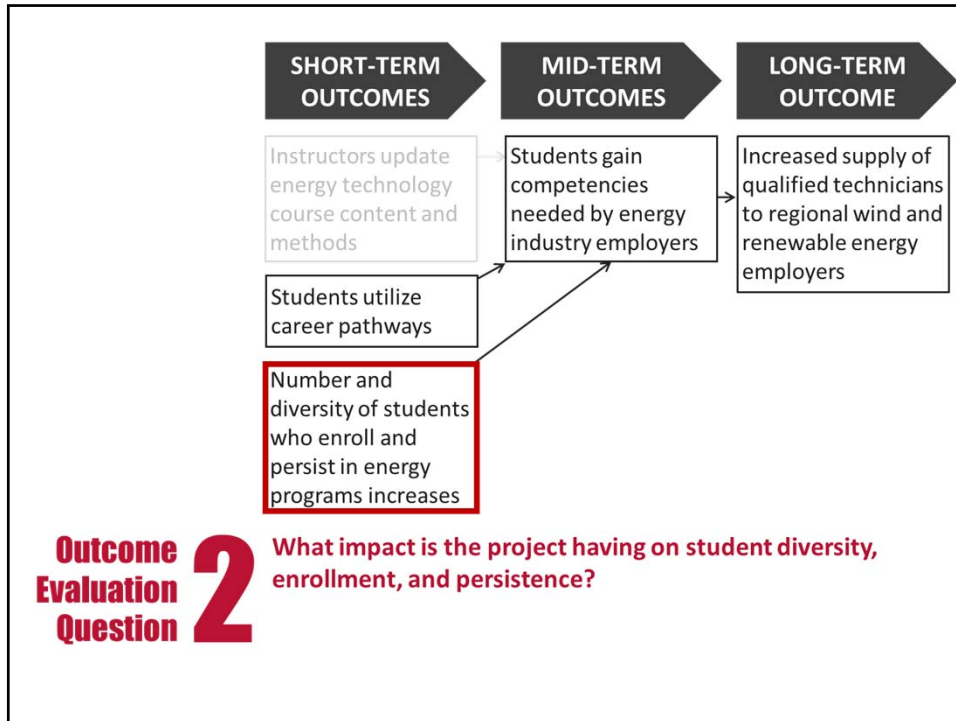

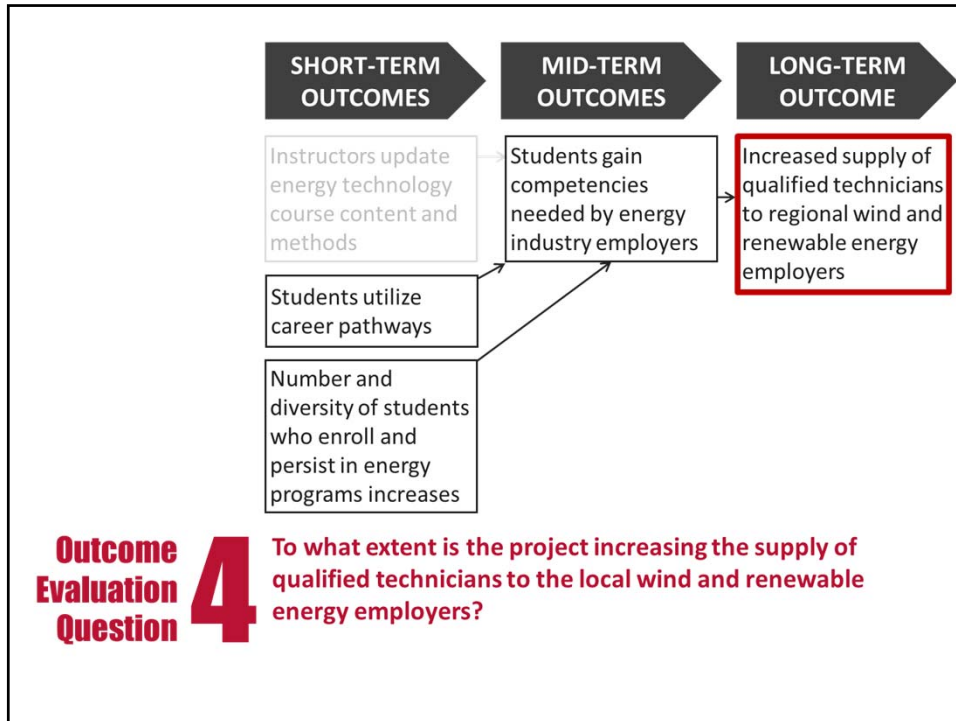

Summary

- ✓ Clearly define intended outcomes.
- ✓ Identify multiple levels of outcomes.
- ✓ Frame evaluation questions around outcomes.
- ✓ Ask evaluation questions that allow for a range of conclusions.
- ✓ **Bonus** - Always include an evaluation question like this:
“What are the project’s unintended positive or negative side effects or outcomes, if any?”

Getting to Outcomes™

Logic model template, online course, and more

Evaluation Questions Checklist

Michael Patton on defining outcomes

Outcome Evaluation: Step-by-Step

March 22, 2017

The slides and recording for this webinar are available at <http://www.evaluate.org/webinars/2017-mar/>

Outcome Evaluation Overview
RAND Corporation's *Getting to Outcomes™* manual is a comprehensive guide to planning, implementing, and evaluating community programs. Chapter 8 provides a thorough overview of outcome evaluation, including selecting a design, choosing methods, and analyzing and interpreting data. [See video 08](#)

Logic Models
Use the **Logic Model Template for ATE Projects and Centers** to create a concise visual depiction of project's activities, outputs, and outcomes and check that they are logically linked before developing evaluation questions and a data collection plan ([Get it here](#)). If you're looking for more in-depth learning about logic models, check out the online course and array of resources in the logic model section of the University of Wisconsin-Extension's website (<http://bit.ly/ucwex>)

Evaluation Questions
The **Evaluation Questions Checklist for Program Evaluation** identifies and explains six criteria for effective evaluation questions. [Get it here](#)

Outcomes
In Chapter 8 of *Essentials of Utilization-Focused Evaluation*, Michael Patton offers guidance on how evaluators can facilitate discussions with evaluation stakeholders to clarify program goals and focus evaluation questions on outcomes and results. He illuminates the important difference between framing questions around goals versus outcome. [Get it here](#)

Data Collection
Using a matrix format for expressing plans for data collection guards against glossing over challenging issues and helps ensure that evaluation questions can be answered with evidence. Evaluate's **Data Collection Planning Matrix** is a template that can help with that task. [Get it here](#)

Causation
Options for linking program activities (causes) and with outcomes (effects) include using control and comparison groups, ruling out alternative plausible explanations, and asking program participants directly. **Building Causation into Survey Items about Outcomes**, a blogpost by Jane Davidson, includes examples of how to ask program participants about the influence of program activities ([Get it here](#)). Other guidance is included in a page on the Better Evaluation website, **Asking Key Informants to Attribute Causality** ([Get it here](#)). To learn more about investigation causation in evaluation, see the **Understanding Causes** section of Better Evaluation's website ([Get it here](#))

Rubrics
Rubrics can be used in evaluation to guide interpretation of results to answer evaluation questions. **Evaluation Rubrics: How to Ensure Transparent and Clear Assessment that Respects Diverse Lines of Evidence**, by Judy Oskiden, describes the process of developing and using rubrics and includes examples of rubrics and how to report rubric results. [Get it here](#)

This material is based upon work supported by the National Science Foundation under grant number 1204693. Any opinions, findings, and conclusions or recommendations expressed in this material are those of the presenters and do not necessarily reflect the views of NSF.

www.evaluate.org 

Questions?

Lori

Miranda

Planning for Data Collection
and Beyond

Indicators

What will be measured in order to answer evaluation questions

Data Sources & Methods

Where information related to indicators will be obtained and how

Analysis

The image shows a hand pointing at a data table with columns for 2013, 2014, and 2015. The table lists months from Jan to Nov and a TOTAL row. Surrounding the table are various charts: a line graph, a pie chart, a bar chart, and a donut chart. The word 'Analysis' is written in large white letters over the top left of the image.

Month/Year	2013	2014	2015
Jan	300	350	400
Feb	400	520	450
Mar	500	440	550
Apr	720	370	600
May	850	400	700
Jun	500	350	450
Jul	400	400	500
Aug	430	350	450
Nov	600	5833	600
TOTAL	6000	5833	6000

How collected data will be transformed into usable information

Interpretation

The image shows a person in a wetsuit standing next to a large glass jar filled with water. The person is holding a yellow measuring cup labeled 'ACE 121'. The word 'Interpretation' is written in large white letters over the top left of the image.

How evaluation findings will be translated into conclusions

For each evaluation question, specify:

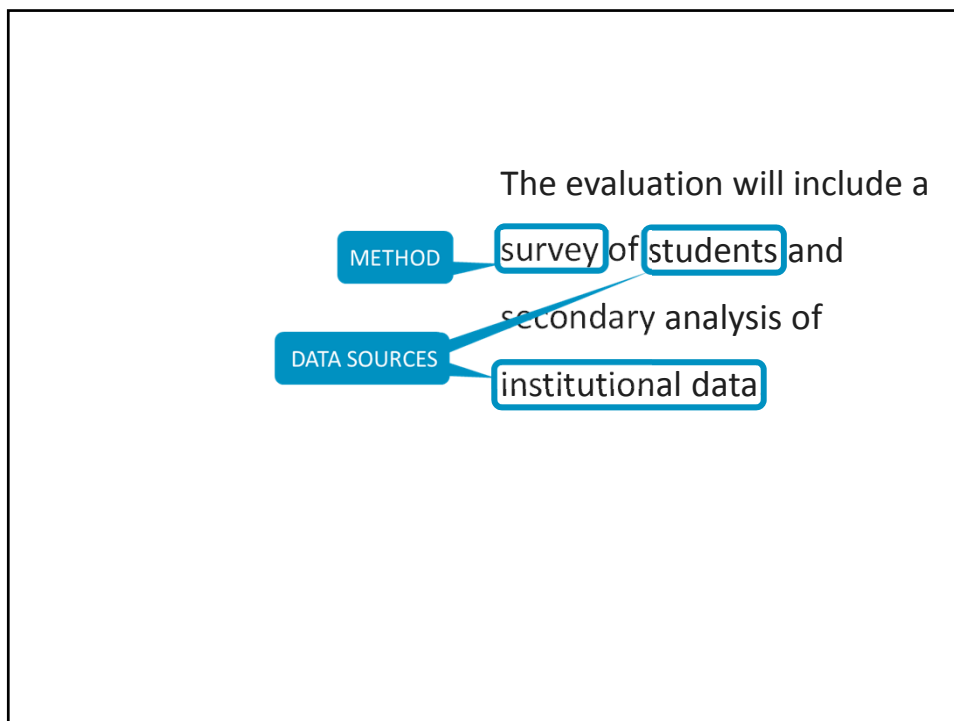

- ✓ Indicators
- ✓ Data sources and methods
- ✓ People
- ✓ Timing
- ✓ Analysis
- ✓ Interpretation

Outcome Evaluation Question 1:

To what extent are students using career pathways established by the project?

INDICATOR	DATA SOURCE & METHOD	PEOPLE	TIMING	ANALYSIS	INTERPRETATION
Number of high school students who are dual enrolled	Institutional data	Project director obtains from institutional research office	End of each semester	No analysis – use raw numbers	Comparison against performance target using rubric
Number and percentage of dual-enrolled students who intend to pursue degree and certificate programs	Survey of dual-enrolled students	External evaluator develops survey and conducts analyses; faculty administer survey	End of each semester	Descriptive statistics, disaggregated by demographic characteristics; inductive coding of qualitative data	Comparison against performance target using rubric

WHAT will be measured **HOW** information will be obtained

But what will be measured?

The evaluation will include a survey of students and secondary analysis of institutional data.

A rectangular frame containing two lines of text. On the left, the question "But what will be measured?" is written in a blue, handwritten-style font. On the right, the text "The evaluation will include a survey of students and secondary analysis of institutional data." is written in a standard black font.

INDICATOR	DATA SOURCE & METHOD
Number of high school students in dual enrollment courses	Institutional data
Number and percentage of dual-enrolled students who intend to pursue degree and certificate programs	Survey of dual-enrolled students

The evaluation will include a survey of students and secondary analysis of institutional data.

If an "outcome" is not caused by the intervention, it is NOT an outcome. It's merely a coincidence.

-Jane Davidson

A hand is shown drawing a horizontal line on a chalkboard. At each end of the line is a small dot. The letter 'A' is written to the left of the first dot, and the letter 'B' is written to the right of the second dot.

Outcome

change resulting from project activities

effect

cause or contributor

Linking cause and effect

- ✓ Use control or comparison groups
- ✓ Scan environment for other influences
- ✓ Ask participants directly

How likely are you to seek a job in the renewable energy field?

- Not at all likely
- Somewhat likely
- Very likely
- Extremely likely

Links cause and effect

How much **impact has this **course** had on the likelihood that you will seek a job in the renewable energy field?**

- Negative impact
- No impact
- Slight positive impact
- Moderate positive impact
- Major positive impact

Asks about both magnitude and direction of effect

Summary

- ✓ Align data collection to **evaluation questions**.
- ✓ Develop concrete plans for analysis and interpretation.
- ✓ Build cause-and-effect into data collection when possible.

www.evaluate.org 

Questions?

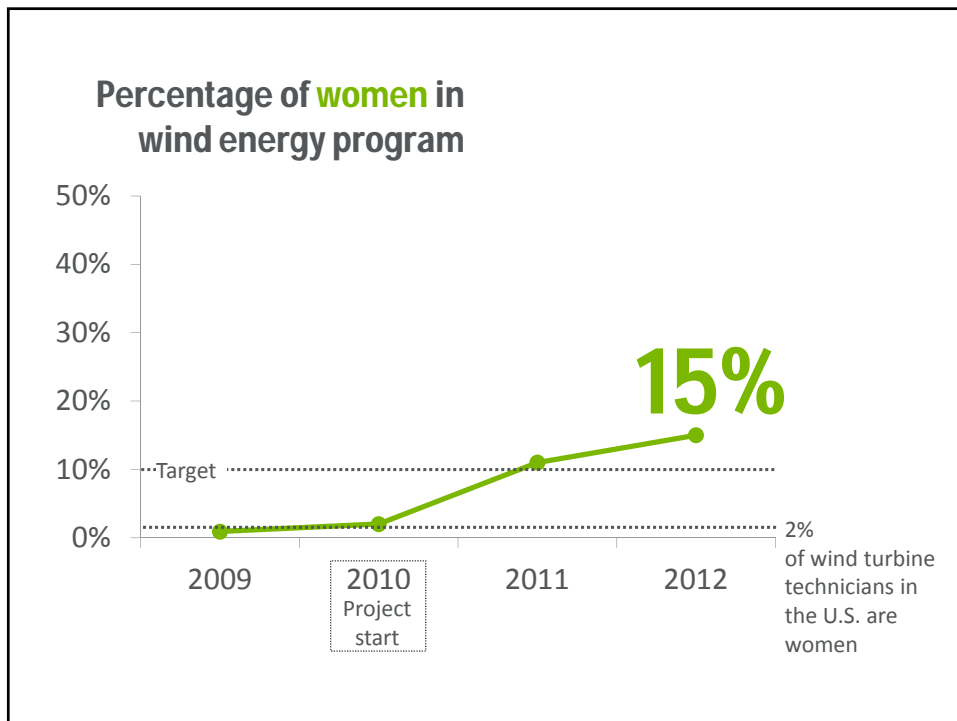

Lori

Miranda

Interpreting Results

Interpretation requires **comparison**

Comparison or Control Groups

Performance Targets

National Data

Historical Data

Standards

Stakeholder Expectations

Outcome Evaluation Question 2:
 What impact is the project having on student **diversity**, enrollment, and persistence?

Indicator	Target
Percentage of women completing program	10%
Number of veterans enrolled	5-10
Percentage of underrepresented minority students completing program	10%

} Performance **targets** from project proposal

Met or not met (Yes/No)	
Indicator	Original Target
Percentage of women completing program	10%
Number of veterans enrolled	5-10
Percentage of underrepresented minority students completing program	10%

Indicator	Met or not met (Yes/No)		Continuum		
	Original Target		Below Target	On Target	Above Target
Percentage of women completing program	10%		Less than 8%	8-12%	More than 13%
Number of veterans enrolled	5-10		Fewer than 5	5-10	More than 10
Percentage of underrepresented minority students completing program	10%		Less than 8%	8-12%	More than 13%

Alternative Rubric				
Indicator	Low Impact	Minimal Impact	Moderate Impact	High Impact
Percentage of women completing program	2% or less	3-5%	6-12%	More than 13%
Number of veterans enrolled	2 or fewer	3-5	5-10	More than 10
Percentage of underrepresented minority students completing program	2% or less	3-5%	6-12%	More than 13%

Outcome Evaluation Question 2:
 What impact is the project having on student **diversity**, enrollment, and persistence?

Indicator	Low Impact	Minimal Impact	Moderate Impact	High Impact
Percentage of women completing program	2% or less	3-5%	6-12%	More than 13%
Number of veterans enrolled	2 or fewer	3-5	5-10	More than 10
Percentage of underrepresented minority students completing program	2% or less	3-5%	6-12%	More than 13%

Overall, the project had a high impact on the diversity of enrolled students, as determined by comparing the project results with rubrics established by project stakeholders.

Indicator	Low Impact	Minimal Impact	Moderate Impact	High Impact	
Percentage of women completing program	2% or less	3-5%	6-12%	More than 13%	15%
Number of veterans enrolled	2 or fewer	3-5	5-10	More than 10	8%
Percentage of underrepresented minority students completing program	2% or less	3-5%	6-12%	More than 13%	13.5%

Rubrics can be qualitative, too

Indicator	Low Engagement	Minimal Engagement	Moderate Engagement	High Engagement
Industry engagement	There is little or no tangible evidence of involvement by industry in any aspect of program	Industry involvement mainly characterized by attendance at meetings, with limited input on program	Industry involvement has provided important contributions to certain aspects of program, such as advising on curriculum or offering facility tours	Industry has substantial involvement on multiple aspects of program, including direct involvement with students through workplace-based learning or mentoring

Creating rubrics, setting standards:

-  1 Research context
-  2 Facilitate dialogue among stakeholders
-  3 Draft together
-  4 Try out with fictional data

Summary

- ✓ Answer evaluation questions in the same terms in which they are asked.
- ✓ Make interpretive processes explicit and transparent.

Guide to developing and using rubrics in evaluation

Webinar Handout

Outcome Evaluation: Step-by-Step

March 22, 2017

The slides and recording for this webinar are available at <http://www.evalu-ate.org/webinars/2017-mar/>

Outcome Evaluation Overview
RAND Corporation's *Getting to Outcomes™ manual* is a comprehensive guide to planning, implementing, and evaluating community programs. Chapter 8 provides a thorough overview of outcome evaluation, including selecting a design, choosing methods, and analyzing and interpreting data. <http://www.rand.org/pubs/manuals/MAN084>

Logic Models
Use the [Logic Model Template for ATE Projects and Centers](http://www.atecenter.org/atecenter/2014/04/01/logic-model-template-for-ate-projects-and-centers/) to create a concise visual depiction of project's activities, outputs, and outcomes and check that they are logically linked before developing evaluation questions and a data collection plan (<http://bit.ly/1vze-3a9c>). If you're looking for more in-depth learning about logic models, check out the online course and array of resources in the logic model section of the University of Wisconsin Extension's website (<http://bit.ly/1vze-3a9c>)

Evaluation Questions
The [Evaluation Questions Checklist for Program Evaluation](http://www.atecenter.org/atecenter/2014/04/01/evaluation-questions-checklist-for-program-evaluation/) identifies and explains six criteria for effective evaluation questions. <http://www.atecenter.org/atecenter/2014/04/01/evaluation-questions-checklist-for-program-evaluation/>

Outcomes
In Chapter 8 of *Essentials of Utilization Focused Evaluation*, Michael Patton offers guidance on how evaluators can facilitate discussions with evaluation stakeholders to clarify program goals and focus evaluation questions on outcomes and results. He illuminates the important difference between framing questions around goals versus outcome. <http://bit.ly/1vze-3a9c>

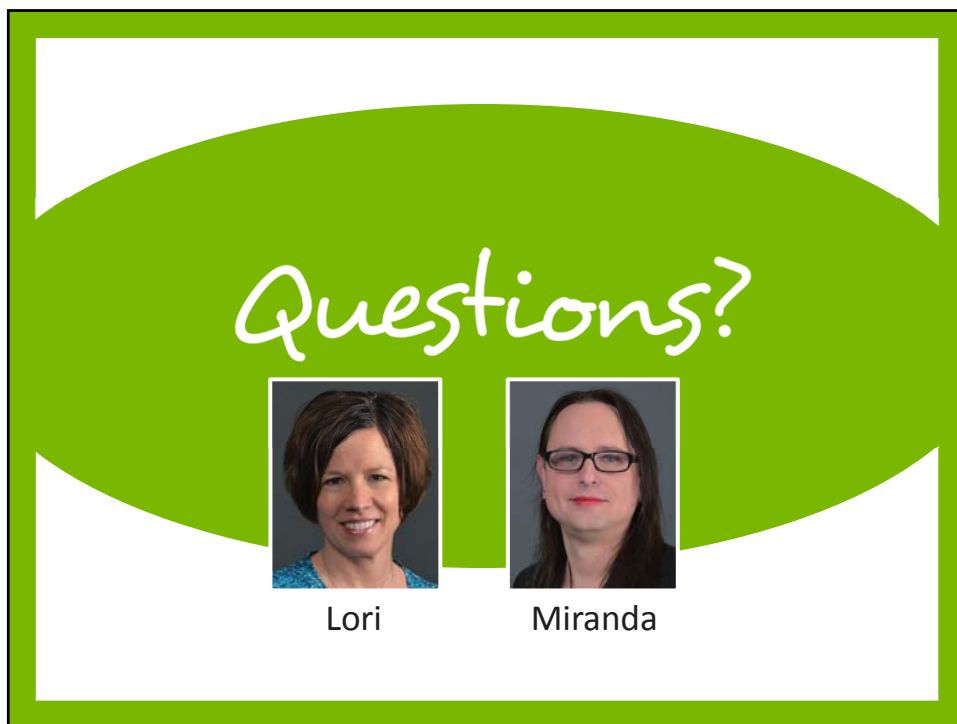

Data Collection
Using a matrix format for expressing plans for data collection guards against glossing over challenging issues and helps ensure that evaluation questions can be answered with evidence. Evaluate's [Data Collection Planning Matrix](http://www.evalu-ate.org/data-collection-planning-matrix/) is a template that can help with that task. <http://www.evalu-ate.org/data-collection-planning-matrix/>

Causation
Options for linking program activities (causes) and with outcomes (effects) include using control and comparison groups, ruling out alternative plausible explanations, and asking program participants directly. [Building Causation into Survey Items about Outcomes](http://www.evalu-ate.org/building-causation-into-survey-items-about-outcomes/), a blogpost by Jane Davidson, includes examples of how to ask program participants about the influence of program activities (<http://bit.ly/1vze-3a9c>). Other guidance is included in a page on the Better Evaluation website, [Asking Key Informants to Attribute Causality](http://www.betterevaluation.org/en/evaluation-questions/asking-key-informants-to-attribute-causality) (<http://bit.ly/1vze-3a9c>). To learn more about investigation causation in evaluation, see the [Understanding Causes](http://www.evalu-ate.org/understanding-causation/) section of Better Evaluation's website (<http://bit.ly/1vze-3a9c>)

Rubrics
Rubrics can be used in evaluation to guide interpretation of results to answer evaluation questions. [Evaluation Rubrics: How to Ensure Transparent and Clear Assessment that Respects Diverse Lines of Evidence](http://www.evalu-ate.org/evaluation-rubrics-how-to-ensure-transparent-and-clear-assessment-that-respects-diverse-lines-of-evidence/), by Judy O'Leary, describes the process of developing and using rubrics and includes examples of rubrics and how to report rubric results. <http://www.evalu-ate.org/evaluation-rubrics-how-to-ensure-transparent-and-clear-assessment-that-respects-diverse-lines-of-evidence/>
